

Cable trays are arranged vertically

Overview

A Vertical Cable Tray is a specialized support system designed to carry electrical and data cables securely in a vertical or riser direction. Think of it as the “spinal cord” or the “ elevator shaft ” for your cabling infrastructure, providing a protected and structured pathway for cables to travel. Rack cable management (RCM) is a rack where all cables are arranged together. There are several types of cable management solutions — horizontal cable management, vertical cable management, copper or fiber cables, overhead cable tray systems and much more. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. There are cable rack systems intended for vertical stacking of horizontal cable runs. I don't have any part numbers off the top of my head.
