

Can optical port modules be hot-swapped

Overview

A key advantage of SFP+ Modules is that they are "hot-swappable", meaning they can be swapped out while the router is still powered on. They also support multiple transmission media and protocols, enhancing flexibility and scalability. A hot-pluggable optical module refers to a transceiver that can be safely inserted into or removed from a powered host system—such as a switch, router, or NIC— without requiring a system reboot or shutdown. This is enabled by: When inserted: 3. Can SFP modules be hot-swapped?
