

## Congo OTN Router 100G

### Overview

It operates at full C-band tunable DWDM wavelengths with 50GHz channel spacing, and supports up to 96 channels over a single fiber, which can greatly save fiber resources. It is an ideal solution for long-distance transmission applications. Pluggable coherent optic transceivers integrate all the functions needed in a digital coherent optic (DCO), including the coherent digital signal processor (DSP), the optics needed for light transmission, modulation and detection, and the microprocessor electronics for turn-up and operation. All. Our OTN processors and OTN physical layers (PHYs) offer leading innovation, integration and power for Data Center Interconnect (DCI) networks. They deliver the quickest time to market and lowest R&D expense for the OEM and minimize the total cost of ownership for the service provider. We also offer. Backbone OTN is a new generation of high-capacity OTN products aimed at Beyond100G era. Meanwhile, there has been close liaison between the IEEE and the International Telecommunication Union (ITU). This equipment supports 10-port 10G customer-side interfaces and 1-port 100G system-side interfaces.
