

Construction site power distribution box cable lugs

Overview

Tubular or compression lugs are heavy-duty lugs designed for large cross-section cables. They are attached using crimping tools to ensure a strong, vibration-resistant bond. These are common in substations, power plants, and industrial equipment. These small components handle high currents, deal with extreme. We offer you a wide range of insulated and non-insulated cable lugs and connectors as well as tubular cable lugs according to current market standards (euro-series). Lugs are made to produce a circumferential, hex- or diamond-shaped compression rather than a simple indent. The precision hardened steel dies exert tremendous, controlled pressure on the lug and. Cable lugs (also known as cable terminals or connectors) are fundamental components within electrical systems, serving as specialized devices designed to terminate electrical cables and facilitate their connection to electrical appliances, other cables, surfaces, or mechanisms.
