

Default password for network security devices

Overview

Default passwords are preset usernames and passwords assigned by the manufacturer to devices like routers, switches, and firewalls. Maintaining a comprehensive directory of factory default passwords is a critical efficiency tool for IT professionals, serving as the first line of defense against unnecessary downtime during hardware. This page serves as a repository of default passwords for various devices and applications. Hardware devices listed below include network devices such as routers, modems, and firewalls, along with various storage devices and computer systems. any?

Manager (caps count !) GatorSurf 5. In this article, I. Default credentials are useful when you do not know the password for a device, you need to set up a device again, or you need to reset a device to the factory default settings. However, they can pose a substantial security risk if left unchanged after.
