

Electrostatic grounding terminal of distribution box

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. The system grounding arrangement is determined by the grounding of the power source. Each DISTRIBUTION BOX and controller must be grounded. The basic rule achieves this through an equipment grounding jumper; four exceptions. There are several factors that make substation grounding absolutely necessary. This helps to reduce the potential difference that exists between. Today, we're diving deep into the world of distribution box grounding, breaking down the standards, and shining a light on those sneaky mistakes that even experienced electricians sometimes make.
