

Extra holes in the cable tray

Overview

Perforated trays: Trays with holes in them are good for medium loads and some protection. Wire mesh trays: Wire mesh trays are great for flexible. In instrumentation EPC (Engineering, Procurement, and Construction) projects, installing cable trays is very important for making sure that signals are sent reliably, that people are safe, and that systems work well for a long time. Unlike power cables, instrumentation cables generally transmit. en completely installed, without damage either to conductors or structural system use maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when. Steel cable trays form the backbone of organized and efficient electrical wiring in industrial, commercial and infrastructure projects. However, improper installation. ngs, etc.
