

## Fiber optic cable operation time

### Overview

While most fiber optic cables have a standard lifespan of 20 to 25 years, they can last much longer under ideal conditions. Many network builders set a minimum expectation of 30 years, and with proper installation and maintenance, fiber optic infrastructure can remain operational. Fiber optic cables are a critical component in modern networks, with their performance directly affecting the stability of data centers and enterprise networks. Effective lifecycle management of fiber optic cables, from selection and installation to daily maintenance and replacement, is essential. The Fiber Optic Association, Inc. During installation, all curvatures should be smooth. The longevity of fiber optic cabling infrastructure has already exceeded 35 years since the first deployments and we expect the average lifetime will be much longer than 35 years based on the materials, technologies, and manufacturing processes used to produce modern, high quality optical fiber and. A fiber optic project begins with a need for communications and ends with an installed fiber optic cable plant and an operating network that fills that communications need.
