

Finding IP Address from MAC Address of Cisco Core Switches

Overview

After taking down the mac address from the local switch using show mac-address-table command, log on to nearby router or L3 switch and issue the show arp to get the IP address. NEW: Try the Beta AI Summary feature on posts in the Routing and SD-WAN forum. 06-07-2016 08:58 AM - edited 03-08-2019 06:06 AM Can someone show me the commands to find a mac-address on a switch and if I know the port I am looking to find it on, also how i find the IP. If you have access to a host, you can simply use the ipconfig (Windows) or the ifconfig (Linux) command to find both the local IP address and the corresponding MAC address. However, there are situations in which you may need to find the IP address that corresponds to a particular MAC address. This guide explains how to map the IP address of a device connected to a Cisco switch port. The process is straightforward and relies on the relationship between MAC addresses, ARP entries, and physical interfaces. Find the routing entry for the IP to know where it is connected Note: From the output above, we found out that is routed via VLAN 888. Any way, we can find out the ip address from the given mac address other than having someone check physically what is connected to the port.
