

Geographic Information Acquisition for Distribution Network Automation

Overview

The paper examines the application of Geographic Information System (GIS) in the logistics and distribution industry, and presents a comprehensive discourse on specific applications of GIS in the domains of route planning and optimization, cargo tracking and monitoring . The paper examines the application of Geographic Information System (GIS) in the logistics and distribution industry, and presents a comprehensive discourse on specific applications of GIS in the domains of route planning and optimization, cargo tracking and monitoring . Industrial organizations are increasingly combining geographic information systems (GIS) and process data from supervisory control and data acquisition (SCADA) systems. Based on the design concept and technical route of the grid planning. Geographic information system (GIS) is the computer system in support of computer software with collection, storage, management, retrieval and comprehensive analysis of a variety of geospatial information, with various forms output data and graphics products. This paper introduced GIS data. GIS provides geographic and topologic network distribution database management and updates featuring integrated grid analysis. Let GIS help with the pressures of rapidly changing technology by creating and maintaining accurate and functional location-based models of the facility network to monitor.

Article Content

Design of intelligent distribution network based on Geographic ...

The display research based on the status quo and the analysis and management technology of distribution network structure under planning state are carried out. The spatiotemporal

Multicriteria Decision Analysis in Geographic Information ...

A multicriteria decision analysis based on geographic information system is proposed in this paper to combine those criteria taking into account decision makers" preferences and physical

Research on Integration Technology Between Distribution Automation ...

Download Citation | Research on Integration Technology Between Distribution Automation System and Geographical Information System | With the rapid development of the construction of the ...

Geospatial mapping of distribution grid with machine learning and ...

Granular geospatial information of distribution grids is needed for various power system applications. Here the authors develop a machine-learning-based model which can accurately map

Application of geographic information system in distribution power ...

This paper introduced GIS data organization and its main applications in distribution power network automation, including both offline and online, and proposed component-based system development

Design and implementation of monitoring and analyzing geographic ...

In the paper, the necessity of power quality monitoring and analyzing for distribution network is discussed, and a monitoring and analyzing geographic information system based on

Design of Distribution Network Pre-planning System Based on GIS

Aiming at the demand of distribution network pre-planning, this paper analyses the current situation and existing problems of distribution network pre-planning, and proposes a distribution grid pre-planning

Application of geographic information system in distribution power ...

Geographic information system (GIS) is the computer system in support of computer software with collection, storage, management, retrieval and comprehensive analysis of a variety of geospatial

Design of Distribution Network Pre-planning System Based on GIS

Developing system design based on GIS, maximizing the integration of grid information, providing more accurate and diversified decision-making basis for distribution network planning

A comprehensive review on role of information technology in city gas ...

The study introduces readers to the smart technologies used for Smart Gas Distribution, such as Geographical Information Systems, Supervisory Control and Data Acquisition Systems,

A Practical Urban Distribution Network Planning Method With

Urban distribution network planning (UDNP) faces new requirements and restrictions due to rapid urbanization. This paper proposes a framework for UDNP, in which the geographic information

The Utilization of Geographic Information System in Logistics Distribution

Accordingly, the paper aims to analyze the specific application of Geographic Information Systems (GIS) in logistics management, including route planning and optimization, cargo tracking and monitoring,
