

Gigabit Optical Module in South Sudan

Overview

South Sudan has set aside \$9 million for the design phase of an optic fibre project in the East African country. The initiative is expected to reduce communication costs, expand coverage, and connect underserved populations. JUBA - South Sudan's Ministry of Information, Communication Technology, and Postal Services has greenlit a \$9 million budget to initiate the design phase of the national fibre optic implementation project, a critical step toward addressing the country's longstanding digital and infrastructure. South Sudan has approved a budget of over \$9 billion to construct a national fiber-optic backbone, with 2,400 kilometers of fiber set to begin in December 2025. This initiative aims to enhance digital governance and accountability, improve the country's low ranking on the UN E-Government. This media converter combines transmit and receive signals onto one fibre strand using two wavelengths. This design avoids the budget losses incurred by the single-wavelength single-fiber technology and minimizes the possibility of reflections in the system. Optical modules complying with SFP. The project, chaired by Deputy Minister of ICT & Postal Services, David Yauyau, is a cornerstone of the government's digital transformation agenda aimed at improving connectivity and expanding access to broadband internet across the country. The funding was approved by the east African country's steering group for. 6Wresearch actively monitors the South Sudan Gigabit Passive Optical Network (GPON) Chipset Market and publishes its comprehensive annual report, highlighting emerging trends, growth drivers, revenue analysis, and forecast outlook.
