

Grounding resistance of communication towers

Overview

Protective grounding standard introduced in Revision G With the introduction of Revision G of the ANSI/TIA 222 standard for antenna supporting structures and antennas, effective January 1, 2006, the standard for protective grounding has increased the minimum number of ground. Protective grounding standard introduced in Revision G With the introduction of Revision G of the ANSI/TIA 222 standard for antenna supporting structures and antennas, effective January 1, 2006, the standard for protective grounding has increased the minimum number of ground. The fundamental objective of this document is to provide guidelines and practices for Ericsson site equipment grounding, with recommended methods that are essential to protect personnel, minimize component failure, and optimize performance by reducing electrical noise. Transient voltage introduced. Because bonding and grounding systems within a building are intended to have one electrical potential, coordination between electrical and telecommunications bonding and grounding systems is essential during design and installation. SAE Inc designs telecommunication tower grounding systems that meet or exceed industry standards.
