

How to get a quote for fiber optic cable laying

Overview

How to do it right: Get multiple quotes – Don't just go with the first provider you talk to. Compare service bundles to see which ISP offers the best installation and service package. Negotiate – ISPs are more flexible than you think. Ask if they can lower installation fees or throw. The initial cost of installing fiber optic cables can vary depending on the chosen installation method and specific project requirements. Total Project Costs: For commercial installations, expect costs ranging from \$5,000 to \$20,000 per mile for underground projects and from \$40,000 to \$60,000 per. Buyers typically pay for fiber laying by combining material costs, labor time, and permitting plus trenching or aerial support fees. The installation type you choose and the layout of your property determine the total labor and materials needed for your project. You should account for permit.
