

How to pull fiber optic cable out of the fiber optic box

Overview

Fiber optic cables should always be pulled by the strengthened yarn fibers inside the outer jacket. I'm using to pulling electrical wire and even ethernet through conduit, so I'm ready with a nice free-spinning setup for the new fiber cable to make sure it feeds smoothly into the 1" conduit. The ISP will have one fiber box where the fragile glass fiber is connected to a Fiber connection socket for GPON (Gigabit Ethernet passive optical network). As an experienced technology writer who has covered broadband advancements for over a decade, I aim to provide readers with trustworthy instructions endorsed by industry experts. On long runs, use proper lubricants and make sure they are. Most fiber optic cables boast a pull strength of 100 - 200 pounds thanks to the internal kevlar or aramid yarn, known as the strength member.
