

IK10 Industrial Ethernet Fiber Optic Cable Fault Locator

Overview

This high-quality pen-type, 10mW, red fiber optic break, Visual Fault Locator (VFL) is specially designed for field personnel who need an efficient and economical tool for fiber tracing, fiber routing and continuity checking in optical networks. The laser-powered VisiFault Visual Fault Locator is a cable continuity tester that locates fibers, verifies cable continuity and polarity. Continuous and flashing modes make for easier identification. It can also be used along with an OTDR tester to find a fault with greater accuracy. A clip-on identifier is not strictly a fault locator, but is. Using PicOS® and AmpCon™ to make network scalability and efficiency, reducing costs and enhancing security. Sharp bends, breaks, faulty connectors and other faults will “leak” red light allowing technicians to visually spot the defects.
