Rack::Insight adds a diagnostics toolbar to Rack apps. When enabled, it injects a floating div allowing exploration of logging, database queries, template rendering times, etc. Rack::Insight stores debugging info over many requests, including AJAX requests. Rack::Insight began life as an fork of Logical::Insight by LRDesign. • I started

a fork because: • Logical::Insight was namespaced as "Insight" • Causing namespace collisions everywhere I have an Insight model. I had to re-namespace all the code. • I also needed to build a few extension gems with additional panels, which didn't fully work in LI • Added the Config class to allow for custom panel load paths and many other extensions that don't work in the use Middleware declaration. • Password-based security • IP-based security • Rack::Insight instrumentation/reporting is broken up into panels. • Panels in default configuration: • Rails Info • Timer • Request

Variables • Cache • Templates • Log (can configure which loggers to watch. Travis-ci: - Please help if you have time! CodeClimate: Add this to your Gemfile gem "rack-insight" In config/environments/development.rb, add:.
