

OLT PON optical module

Overview

At the heart of a point-to-multi-point or passive optical network (PON) is the optical line terminal (OLT). Modern OLTs offer communication service providers (CSP) the ability to launch multigigabit services to tens of thousands of subscribers from a single location or just ten. Fiber-to-the-home. Cisco's Routed PON Solution is a transformational approach that condenses the OLT chassis into a pluggable form factor. In addition, the transmission between OLT and ONU/ONT adopts an optical. The Passive Optical Network (PON) is the indispensable foundation for delivering ubiquitous, multi-gigabit broadband connectivity, a necessity for modern economies and residential life. Unlike active optical components requiring power, PON leverages passive splitters, making the modules in the Optical Line Terminal (OLT) at the provider's end and the Optical Network Unit (ONU) or. Our main product lines include ONU/ONTs, OLTs, wireless routers, CPE, and other access products to meet the needs of various telecom operators, and we are committed to delivering ultra-fast network experiences to broadband users worldwide. Tell us your business needs, and we will find the perfect.
