

## Precautions for Optical Cable Inspection

### Overview

It is recommended that all fiber connector are inspected, cleaned, re-inspected prior to every mating. This will help prevent cross contamination and dirt build up Invisible laser radiation might be emitted from fibers or connectors. Do not stare into beams or view directly with. There are three main principles that needs to be taken in consideration for an efficient optical connection: a perfect core alignment, perfect physical contact and dirt-free connectors. 1) The other portion of a good physical contact between the connectors ferrules is the absence of any type of. es conform to the guidelines expressed in the American National Standards Institute document (ANSI Z535) for hazard alert messages. Alerts are included in this instru d ath or serious i jury ectacles) conforming to ANSI Z87, for eye protection from accidental injury wh n ha dling chemicals, cab. This article covers the procedures required to work safely with fiber optic components as well as some general information. Lightwave/fiber optic systems, their associated test sets, and similar operating systems use semiconductor laser transmitters that emit light at wavelengths of 850 nm or 0. It is important to note that inspection and cleaning are critical steps that MUST be performed before any fiber optic mating is completed; including. It is mandatory that proactive inspection and certification of each fiber end face, in accordance with IEC standard, is required to optimize connector and network performance while preventing costly damage and long-term maintenance and troubleshooting issues. This document provides basic overview.
