

Requirement for complete bolts in explosion-proof distribution boxes

Overview

The essential requirement of explosion-proof distribution box bolts is that they are made of high-strength stainless steel, usually stainless steel 304, 316, 316L, and other materials. The bolt material, characteristics, size, tooth type, and mechanical. Pepperl+Fuchs provides a specialized portfolio of Ex d (flameproof) and Ex tb (dust protection by enclosure) certified terminal boxes and junction boxes engineered for reliable use in explosion-hazardous areas. These sturdy solutions are certified according to global standards such as ATEX, IECEx. Explosionproof enclosures are used as classified enclosures, pull boxes, or control panels in rigid conduit systems and with metal clad cable rated for hazardous locations. These places are more prone to protection accidents.
