

Resource Bridge

Overview

Azure Arc resource bridge is a prepackaged virtual appliance that runs as a Kubernetes-based management cluster deployed on your on-premises infrastructure (private cloud). This repository contains relevant resources for administering Azure Arc resource bridge (preview). NOTE: Any resources here might still be in development and should only be used after. The scenarios in this section will walk you through how to connect your VMware vCenter Server to Azure Arc using PowerShell. The version support policy for Arc resource bridge generally covers version (s) released within the last 6 months.
