Overview

This part of IEC 60793 establishes uniform requirements for measuring the chromatic dispersion of optical fibre, thereby assisting in the inspection of fibres and cables for commercial purposes. Chromatic dispersion varies with wavelength. In particular, publications cover the area of tests, measurements and calibration ISO/IEC 17025 is a guide published by ISO. It addresses interoperability and compatibility between manufacturers. This work materialized through the development of good practices, procedures and specifications documents, reflecting a certain state of the art at a given time, and the result of a consensus of all stakeholders (optional). The FOA charter is "To promote professionalism in fiber optics through education, certification and standards," and has been involved in these standards committees for decades. The technical content of IEC publications is kept under constant review by the IEC. Corning recommends that all fiber optic systems be tested to a minimum set.
