

Syrian local power distribution box

Overview

International sanctions against Syria further undermined Syria's electricity sector, including by barring foreign (i.e. European and Arab) entities from extending loans or implementing infrastructure projects and by straining Syria's ability to import fuel and spare parts. Overview According to the in 2022 almost all electricity was generated from and, like An agreement has been signed for gigawatt scale solar power in Syria. In 2001 Syria reportedly produced 23.3 billion (kWh) of electricity and consumed 21.6 billion kWh. As of January 2002, Syria. As of 2025 the country lacks a stable grid. In August 2025, had been increased due to increased exports of Azerbaijani gas allowing for the reactivation of shut-down and partially operating generation. In the 2000s, Syria's struggled to meet the growing demands presented by an increasingly energy-hungry society. Demand grew by roughly 7.5% per year during this decade, fueled by the expansi.
