This document does not replace the relevant rules or general or specific standards and regulations, the document contains the recommendation for the handling with the optical cables and its storage. The information applies to all types of the optical cables. The likelihood of cable damage or. If the cable remains outside for more than 24h during installation protective material should be used to prevent cable damage. These cables will provide exceptional speed and reliability, but improper storage can lead to damage and reduced performance. Following the right storage practices is essential to keep your fiber optic cables in. Always store fiber optic cable by standing the reels on both flanges, or held through the center. This may cause wraps of cable to cascade and tangle, causing possible future cable damage when unwinding.
