

# What is the normal length for a network patch cable in a server rack

## Overview

Server racks or data centers: 0.3m to 2m patch cables maintain short, organized runs between patch panels and switches. Inter-rack connections: 5m to 15m cables are suitable for linking equipment across racks or cabinets. Given a rack is 19" wide, it's generally less than 19" of "slack" in each cable compared to the longest distance, so hiding that much length to make it appear tidy is usually just as letting the cable sag behind the server by a few cm. Don't forget that if your server is on sliding rails, you need. The standard lengths of patch cables can vary depending on the application and the specific needs of a network setup. Typically, patch. They are different lengths, with short ones (under 10 cm) at the ends of the panel, longer ones (30 - 40 cm) in the centre; and with the cables out straight, it's really easy to see which is which.
