

What is the service life of a 2m fiber optic panel

Overview

While routers, switches, and transceivers often have upgrade cycles of 3 to 5 years, properly installed and maintained fiber cabling systems can last 15 years or more — spanning multiple hardware generations. So, how often. The lifecycle of fiber optic products involves multiple stages, from initial design and manufacturing to deployment, maintenance, and eventual upgrades or replacement. Proper lifecycle management ensures reliability, cost-effectiveness, and minimal environmental impact (2). Understanding how long these cables are designed to last can help users make informed decisions when choosing their connectivity solutions. A process called 'stress corrosion' is the biggest threat to the longevity of fibre cabling. Even with the most skillful and diligent installation, commercially-produced.
