

What optical module should IRU8846 use

Overview

It uses a full-speed single-channel serial module with an XFI (10Gb serial interface) connection, which can replace Xenpak and its derivative products. SFP+ is also a 10G optical module. Its primary function is to achieve optoelectronic conversion by converting electrical signals into optical signals and vice versa. An. The Ericsson KRC161754/2 IRU 8846 is an indoor radio unit (IRU) designed for integration into the Ericsson Radio System, enabling multi-band, multi-operator indoor wireless networks. Operating at the physical layer of the OSI model, optical modules are core devices in optical. The optical module, known as Optical Transceiver in English, is a general term for various module categories, including optical receiver modules, optical transmitter modules, optical transceiver modules, and optical forwarding modules. Today, when we talk about optical modules, we usually mean. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. POWER MANAGEMENT IC, 0 TO 150DEG C; Input Voltage:-; Output Voltage:-; Output Current:-; Supply Volt. 8V, 1010, SOIC8; Output Type:Fixed; Input Voltage Min:5V; Input Voltage Max:7V;.
